Warning: package 'knitcitations' was built under R version 3.3.2

Write your abstract here.
```

5 INTRODUCTION

2

- $_{16}$ Write your introduction here. You can cite bibliography like this (Yan and Gerstein 2011, Sutherland et
- al. 2011), if you provide a BibTeX file with references. See

Keywords: rmarkdown, reproducible science

- 18 http://rmarkdown.rstudio.com/authoring_bibliographies_and_citations.html for more information.
- Or you could also use knitcitations or RefManageR to fetch bibliographic metadata automatically from
- 20 the web. For example, citing a paper can be as easy as providing its DOI (Clark and Gelfand 2006) or
- even just a few keywords (Ricklefs 2008). They will then automagically appear in the list of cited
- 22 references.(Yan and Gerstein 2011)
- 23 You can even specify the desired output format for your bibliography by including a style file for a
- 24 specific journal (e.g. "ecology.csl"). Many different bibliography styles (CSL files) can be obtained at
- 25 http://citationstyles.org/ or https://github.com/citation-style-language/styles.

26 METHODS

27 Study Area

We worked in a **beautiful** place with lots of trees, like Quercus suber and Laurus nobilis.

29 Data collection and analysis

30 We applied a linear model where

$$y_i = \alpha + \beta * x_i$$

- We used the statistical language R (R Core Team 2016) for all our analyses. These were implemented in
- dynamic rmarkdown documents using knitr (Xie 2014, 2015, 2016) and rmarkdown (Allaire et al.
- 2016) packages. All the multilevel models were fitted with lme4 (Bates et al. 2015).

34 RESULTS

- Trees in forest A grew taller than those in forest B (mean height: 25 versus 13 m). And many more
- 36 cool results that get updated dynamically.

37 DISCUSSION

38 Discuss.

39 CONCLUSIONS

40 ACKNOWLEDGEMENTS
